EXP N0 3: WIRESHARK (Password Capturing)

Aim :

Use **Wireshark** to capture network traffic and locate plaintext credentials transmitted over insecure protocols (e.g., HTTP/FTP/Telnet).

Procedure :

Start a capture on the correct interface, perform the login, filter for http and http.request.method=="POST", then inspect the **HTML form URL Encoded** fields to read uname/pass.
Important Only test on systems/networks you own or have explicit permission to test; capturing others' credentials is illegal and unethical.

About Us | Privacy Policy | Contact Us | ©2019 Acunetix Ltd
Warning: This is not a real shop. This is an example PHP application, which is intentionally vulnerable to web attacks. It is intended to help you test Acunetix. It also helps you understand how developer errors and bad configuration may let someone break into your website. You can use it to test other tools and your manual hacking skills as well. Tip: Look for potential SQL Injections, Cross-site Scripting (XSS), and Cross-site Request Forgery (CSRF), and more.
